

DIAGRAM/DRAWING TUBES - small size -225mm

The Tubes are intended for TRANSIT of drawings to site but may be used in CONTROL PANELS, or for STORAGE/POSTAL APPLICATIONS.

The Tubes are made from Semi-rigid PVC Extrusion of 50mm Outside Diameter and in Lengths to suit particular sizes of Diagrams and Drawings.

The Tubes are fitted with two Moulded Polythene End-caps of the 'push-in' type.

For CONTROL PANELS, the Assembly can include additional features and components

/MB Two Mounting Brackets, each comprising a circular Pipe-clip and Surface-mounting Bracket, both components being PVC Mouldings and complete with Clamping Screws and Nuts.

/SC Two Spring Mounting Clips.

+RC The top Endcap is fitted with a Nylon Retaining-cord; the other end of the Pull-cord fastens to the top Mounting-bracket or Clip, or to a Cable Tie. This retains the Endcap when it is removed from the end of the Tube, whilst Diagrams/Drawings are being inserted or removed.

The Endcaps are of a shallow 'top-hat' shape and they are designed to offer a firm 'push-fit' into the Tube: the outer surface of the 'crown' has multiple shallow flanges and the 'brim' has a slight overhang beyond the outer periphery of the Tube wall. These features give a good degree of protection against the ingress of dust, moisture and insects, with their consequent possibility of damage to the contents of the Tube.

The Clips and Brackets are Light Grey, to match the Tube, and the Endcaps are White. The Spring Clips can be plated steel or protected with a white PVC coating.

The Tubes are suitable for mounting in vertical, horizontal or inclined positions.

Diagram Tube	DT225+RC
Length (a)	225mm
Diameter (b)	50mm
